

# IPM 2021/2022

## Assignment 1

### Good Design

The objective of this interface is to control remotely a television. In my opinion, the remote has a relatively simple and small design and every button has its unique and perceptible purpose. It also has a mute button, but it's a bit far from the entire interface therefore not very noticeable.

The simple and small design it's a positive aspect because its more manageable and easier to keep. On the one hand, the number of buttons in it may make it a bit overwhelming for the user. In the other hand, all of them have a clear and obvious function.

### Bad Design

The objective of this interface is to control the microwave. In my understanding, it's a very simple interface however it's confusing because it isn't very clear what each button is supposed to do. The wheel in the bottom of the picture only controls some functionalities of the microwave, however it doesn't control microwave timer.

In my opinion it was designed this way because it is visually appealing. In my way of thinking the best approach for this design would be to add the functionality for the microwave, separate the buttons from each other and add the functionality of controlling the microwave timer to the dial.
